## Product Overview

Address Fabric is a pre-geocoded national list of addresses and corresponding locations, with each address/location combination having a unique identifier (pbKey™). Address Fabric data can be used to solve location-related challenges, such as retail location, utility siting, or insurance premium calculation.

## What's New

- Canada Address Fabric data is updated to March Geocoding Currency.

## Known Issues

- At this time, secondary address information is not supported for Canada.
- As we stabilize the persistence of pbKey™, we expect the total address counts for Canada to be lower than in the previous version.
- There are approximately 121,000 duplicate pbKey™ in the data. They are under investigation.
