Summary

StreetPro® suite of data products offer up-to-date, premium street-level vector maps, with over 40 layers of information. These provide the real-world display and detailed quality needed to provide a flexible, multi-purpose foundation for critical business use.

Benefits

- To maintain accuracy of the data used in your applications, this data update provides access to the very latest street level mapping.
- To provide your customers with detailed spatial information, show them simple maps of your locations, facilities and assets, and make savings through understanding your spread of customers, real estate, fleet of vehicles, workforce.
- To expand your coverage with StreetPro data that is available in the same format for over 30 countries, contact your local Pitney Bowes reseller or visit www.pb.com/software for more details.
- To stay up to the minute, you can deploy StreetPro® with the very latest Pitney Bowes software packages, using a range of provided workspace formats.

Features

- Over 40 layers of data structured logically to help you choose what is important and useful for your particular application.
- Workspaces are pre-defined and included. These can take the form of any of the following: WOR files for use with MapInfo Professional, MapInfo Definition Files (MDFs) for use with MapXtreme Java, Geosets for use with MapX, or MWS files for use with MapXtreme. The inclusion of the workspaces mean that you can benefit from Pitney Bowes' data expertise by accessing them straight away to get data loaded, and in use immediately.

Products

StreetPro Canada consists of two (2) related products: Display Province, and EAL Province.

- **StreetPro Display** (1:10,000) include all the layers plus inner city detail and street layers. This is suited to detailed analysis.
- **StreetPro with Addresses** (1:10,000) include all the layers in **StreetPro Display**, plus street intersections and a streets layer containing address ranges that can be used for geocoding.

[What's New in StreetPro Version 2018.06](#) is intended to cover all the above products. However, it should be noted that:

- The Street Network Coverage and Points of Interest specified may be less because the product is designed for a scale of 1:250,000.

Vintage Information

From 2008 onwards, Pitney Bowes data products explicitly show the 'vintage' of source data in unambiguous terms. ('Vintage' refers to the currency of the data as of a specific date and does not correspond exactly to the time of product release because of data-to-product production time.)

The format is:

YYYY.MM

where:

YYYY is the four-digit year; and

MM is the data vintage's calendar month (01-12).

Metadata

- A metadata *xml* file; 'SPro_Metadata_2018_06.xml' is included to provide information about the data.
- A stylesheet is included to make the metadata *xml* file easier to read and understand.
- StreetPro metadata *xml* files are ISO 19139-compliant.

What's New in StreetPro Version 2018.06

- The coastlines and islands of the Saint Lawrence River are corrected and added between the cities Kingston and Quebec.
- The coastline realignment project is started and first improvements are visible in the area of Vancouver and the Saint Lawrence Bay.
- About 500 conflicts are solved between Water Areas and Building Footprints by realigning the conflicting Water Area.
- Created more than 145000 km of new Geometry, mainly Backroads on different areas.
- The name 'downtown', was added to several major city neighborhoods that were designated the center or hub of the downtown activity of a given city.
- Updated House Number Ranges on 34315 km in 153 counties in 6 states using Address Points to calibrate the ranges.

Next Update

As mentioned in the 2014.12 release of StreetPro Canada, no future updates will be released for Census Division tiled data. The Canada StreetPro product will be offered at Province level only. Please contact your Pitney Bowes Account Manager if further clarification is required.
