Summary

StreetPro[®] suite of data products offer up-to-date, premium street-level vector maps, with over 40 layers of information. These provide the real-world display and detailed quality needed to provide a flexible, multi-purpose foundation for critical business use.

Benefits

- To maintain accuracy of the data used in your applications, this data update provides access to the very latest street level mapping.
- To provide your customers with detailed spatial information, show them simple maps of your locations, facilities and assets, and make savings through understanding your spread of customers, real estate, fleet of vehicles, workforce.
- To expand your coverage with StreetPro data that is available in the same format for over 30 countries, contact your local Pitney Bowes reseller or visit www.pitneybowes.com/us for more details.
- To stay up to the minute, you can deploy StreetPro[®] with the very latest Pitney Bowes software packages, using a range of provided workspace formats.

Features

- Over 40 layers of data structured logically to help you choose what is important and useful for your particular application.
- Workspaces are pre-defined and included. These can take the form of any of the following: WOR files for use with MapInfo Professional, MapInfo Definition Files (MDFs) for use with MapXtreme Java, Geosets for use with MapX, or MWS files for use with MapXtreme. The inclusion of the workspaces mean that you can benefit from Pitney Bowes' data expertise by accessing them straight away to get data loaded, and in use immediately.

Products

StreetPro Classic and Display Canada consists of two (2) related products: Display Province, and EAL Province.

- **StreetPro Display** (1:10,000) include all the layers plus inner city detail and street layers. This is suited to detailed analysis.
- **StreetPro with Addresses** (1:10,000) include all the layers in **StreetPro Display**, plus street intersections and a streets layer containing address ranges that can be used for geocoding.

[What's new in this version](#) is intended to cover all the above products. However, it should be noted that:

- The Street Network Coverage and Points of Interest specified may be less because the product is designed for a scale of 1:250,000.

Vintage Information

From 2008 onwards, Pitney Bowes data products explicitly show the 'vintage' of source data in unambiguous terms. ('Vintage' refers to the currency of the data as of a specific date and does not correspond exactly to the time of product release because of data-to-product production time.)

The format is:

YYYY.MM.PP

where:

YYYY is the four-digit year;

MM is the data vintage's calendar month (01-12), and

PP is the product revision version

Metadata

- A metadata *xml* file; 'SPro_Metadata_2018_09.xml' is included to provide information about the data.
- A stylesheet is included to make the metadata *xml* file easier to read and understand.
- StreetPro metadata *xml* files are ISO 19139-compliant.

What's new in this version

- Around 1600 km of roads across the country have received updates or new street names.
- Around 20000 km of roads have been added, including roads in recreational areas.
- The coastline realignment project has continued; around 5000 km of coastline has been realigned. This improvement will continue during the next quarter as well.
- We have updated House Number Ranges on 31000 km of streets, using Address Points to calibrate these ranges.
- 54 downtown Neighborhoods have been added.
