Summary

StreetPro® suite of data products offer up-to-date, premium street-level vector maps, with over 40 layers of information. These provide the real-world display and detailed quality needed to provide a flexible, multi-purpose foundation for critical business use.

Benefits

- To maintain accuracy of the data used in your applications, this data update provides access to the very latest street level mapping.
- To provide your customers with detailed spatial information, show them simple maps of your locations, facilities and assets, and make savings through understanding your spread of customers, real estate, fleet of vehicles, workforce.
- To expand your coverage with StreetPro data that is available in the same format for over 30 countries, contact your local Pitney Bowes reseller or visit www.pb.com/software for more details.
- To stay up to the minute, you can deploy StreetPro® with the very latest Pitney Bowes software packages, using a range of provided workspace formats.

Features

- Over 40 layers of data structured logically to help you choose what is important and useful for your particular application.
- Workspaces are pre-defined and included. These can take the form of any of the following: WOR files for use with MapInfo Professional, MapInfo Definition Files (MDFs) for use with MapXtreme Java, Geosets for use with MapX, or MWS files for use with MapXtreme. The inclusion of the workspaces mean that you can benefit from Pitney Bowes' data expertise by accessing them straight away to get data loaded, and in use immediately.

Products

The StreetPro[®] suite consists of the related products:

- **StreetPro Display** (1:10,000) is built at two (2) levels; State tile, and County tile. This is suited to detailed analysis. The US StreetPro products consist of:
 - StreetPro Display State Tile: The State tile files consist of all layers for each state.
 - Display County Tile: The County tile has all the layers cut at each county boundary.
 - StreetPro EAL: It contains Address information that can be used for geocoding (1:10,000) and includes all the layers in **StreetPro Display**, plus street intersections and a streets layer containing address ranges that can be used for geocoding.

[What's New in StreetPro Version 2017.12](#) is intended to cover all the above products. However, it should be noted that:

- For the supplementary layers supplied with **StreetPro with Addresses**, you will need to refer to [Address Range Updates](#).

Vintage Information

From 2008 onwards, Pitney Bowes' data products explicitly show the 'vintage' of source data in unambiguous terms. ('Vintage' refers to the currency of the data as of a specific date and does not correspond exactly to the time of product release because of data-to-product production time.)

The format is:

YYYY.MM

where:

YYYY is the four-digit year; and

MM is the data vintage's calendar month (01-12).

Metadata

- A metadata *xml* file; 'SPro_Metadata_2017_12.xml' is included to provide information about the data.
- A stylesheet is included to make the metadata *xml* file easier to read and understand.
- StreetPro metadata *xml* files are ISO 19139-compliant.

What's New in StreetPro Version 2017.12

- We corrected traffic flow direction and vehicle type restriction information, together with Validity Period information for the US Central Park Drives and transverse roads to reflect reality.
- Created ~200 new subdivisions containing new streets and street names across the U.S.
- More than 5000 km of new roads have been added through new geometry detecting tools.
- Land Use feature Park Or Garden (Type 'City Park') was reviewed and updated for Detroit, Phoenix, San Jose, Las Vegas and Los Angeles and will be concluded in 2018.03. Updated or added the 348 City Parks in this release.
- Created 34 new Postal Districts and 3 has been removed for the this release.
- Lanes update included ~1100 junctions with updated content for USA
- Speed Restrictions have been added, with gap filling for verified speed restrictions completed for most states.
- Implicit truck speeds have been updated for all states with the exception of Arkansas.

Address Range Updates

- Updated Address Points, Street Names, House Number Ranges and/or Postal Code information on 5355 km of streets (extending updates across road lengths through their corresponding Postal Code) in 127 counties in 7 states
- Updated House Number Ranges on 294160 km streets in 1405 counties and in 47 states using Address Points to calibrate these ranges in USA
