pitney bowes

StreetPro U.S.
### Version 2018.06

Release Notes

StreetPro is Pitney Bowes' flagship street data product that offers comprehensive and current street centreline and address information suitable for a broad range of applications and services. This document contains information about the Version 2018.06.

Complete documentation is located at **our support site**.

Contents:

Summary

StreetPro® suite of data products offer up-to-date, premium street-level vector maps, with over 40 layers of information. These provide the real-world display and detailed quality needed to provide a flexible, multi-purpose foundation for critical business use.

Benefits

- To maintain accuracy of the data used in your applications, this data update provides access to the very latest street level mapping.

- To provide your customers with detailed spatial information, show them simple maps of your locations, facilities and assets, and make savings through understanding your spread of customers, real estate, fleet of vehicles, workforce.

- To expand your coverage with StreetPro data that is available in the same format for over 30 countries, contact your local Pitney Bowes reseller or visit **www.pb.com/software** for more details.

- To stay up to the minute, you can deploy StreetPro® with the very latest Pitney Bowes software packages, using a range of provided workspace formats.

Features

- Over 40 layers of data structured logically to help you choose what is important and useful for your particular application.

- Workspaces are pre-defined and included. These can take the form of any of the following: WOR files for use with MapInfo Professional, MapInfo Definition Files (MDFs) for use with MapXtreme Java, Geosets for use with MapX, or MWS files for use with MapXtreme. The inclusion of the workspaces mean that you can benefit from Pitney Bowes' data expertise by accessing them straight away to get data loaded, and in use immediately.

Products

The StreetPro® suite consists of the related products:

- **StreetPro Display** (1:10,000) is built at two (2) levels; State tile, and County tile. This is suited to detailed analysis. The US StreetPro products consist of:

  - StreetPro Display State Tile: The State tile files consist of all layers for each state.

  - Display County Tile: The County tile has all the layers cut at each county boundary.

  - StreetPro EAL: It contains Address information that can be used for geocoding (1:10,000) and includes all the layers in **StreetPro Display**, plus street intersections and a streets layer containing address ranges that can be used for geocoding.

What's New in StreetPro Version 2018.06 is intended to cover all the above products.

Vintage Information

From 2008 onwards, Pitney Bowes' data products explicitly show the 'vintage' of source data in unambiguous terms. ('Vintage' refers to the currency of the data as of a specific date and does not correspond exactly to the time of product release because of data-to-product production time.)

The format is:

YYYY.MM

where:

YYYY is the four-digit year; and

MM is the data vintage's calendar month (01-12).

Metadata

- A metadata *xml* file; 'SPro_Metadata_2018_06.xml' is included to provide information about the data.

- A stylesheet is included to make the metadata *xml* file easier to read and understand.

- StreetPro metadata *xml* files are ISO 19139-compliant.

What's New in StreetPro Version 2018.06

- The ongoing Landuse improvement project focused on Airports. About 2600 Airport Runways are captured or realigned in the 2018.06 release. About 1000 Runways are pending and will be part of the 2018.09 release. This is the last phase of the Airport improvement project.

- In the ongoing Landuse improvement project focused on City Parks about 6000 park polygons are captured or realigned in the 2018.06 release. The improvement will proceed during the next quarter by reviewing the important city centers.

- About 1200 conflicts are solved between Water Areas and Building Footprints by realigning the conflicting Water Area.

- More than 35000 km of new roads added in targeted locations

- The name 'downtown', was added to several major city neighborhoods that were designated the center or hub of the downtown activity of a given city.

- A new City Center settlement type, Historic City Center, was introduced for the first time this quarter. This allows city centers to be captured with population zero that are deemed Historic in name. A few thousand nationwide were introduced, this project will conclude in the 2018.09 quarter.

- Updated House Number Ranges on 236603 km in 2636 counties in 51 states using Address Points to calibrate the ranges.
