pitney bowes

StreetPro Classic and Display United States
Version 2018.09.0

Release Notes

StreetPro is Pitney Bowes' flagship street data product that offers comprehensive and current street centreline and address information suitable for a broad range of applications and services. This document contains information about the Version 2018.09.0.

Complete documentation is located at **our support site**.

Contents:

Summary

StreetPro® suite of data products offer up-to-date, premium street-level vector maps, with over 40 layers of information. These provide the real-world display and detailed quality needed to provide a flexible, multi-purpose foundation for critical business use.

Benefits

- To maintain accuracy of the data used in your applications, this data update provides access to the very latest street level mapping.

- To provide your customers with detailed spatial information, show them simple maps of your locations, facilities and assets, and make savings through understanding your spread of customers, real estate, fleet of vehicles, workforce.

- To expand your coverage with StreetPro data that is available in the same format for over 30 countries, contact your local Pitney Bowes reseller or visit **www.pitneybowes.com/us** for more details.

- To stay up to the minute, you can deploy StreetPro® with the very latest Pitney Bowes software packages, using a range of provided workspace formats.

Features

- Over 40 layers of data structured logically to help you choose what is important and useful for your particular application.

- Workspaces are pre-defined and included. These can take the form of any of the following: WOR files for use with MapInfo Professional, MapInfo Definition Files (MDFs) for use with MapXtreme Java, Geosets for use with MapX, or MWS files for use with MapXtreme. The inclusion of the workspaces mean that you can benefit from Pitney Bowes' data expertise by accessing them straight away to get data loaded, and in use immediately.

Products

The StreetPro® suite consists of the related products:

- **StreetPro Display** (1:10,000) is built at two (2) levels; State tile, and County tile. This is suited to detailed analysis. The US StreetPro products consist of:

  - StreetPro Display State Tile: The State tile files consist of all layers for each state.

  - Display County Tile: The County tile has all the layers cut at each county boundary.

  - StreetPro EAL: It contains Address information that can be used for geocoding (1:10,000) and includes all the layers in **StreetPro Display**, plus street intersections and a streets layer containing address ranges that can be used for geocoding.

What's New in this Version is intended to cover all the above products.

Vintage Information

From 2008 onwards, Pitney Bowes' data products explicitly show the 'vintage' of source data in unambiguous terms. ('Vintage' refers to the currency of the data as of a specific date and does not correspond exactly to the time of product release because of data-to-product production time.)

The format is:

YYYY.MM.PP

where:

YYYY is the four-digit year;

MM is the data vintage's calendar month (01-12), and

PP is the product revision number

Metadata

- A metadata *xml* file; 'SPro_Metadata_2018_09.xml' is included to provide information about the data.

- A stylesheet is included to make the metadata *xml* file easier to read and understand.

- StreetPro metadata *xml* files are ISO 19139-compliant.

What's New in this Version

- In the framework of the ongoing Land Use improvement project focused on Airports, around 1000 Airport Runways have been captured or realigned. This was the last phase of the Airport improvement project.
- In the framework of the ongoing Land Use improvement project, Land Use features have been reviewed and detailed out. This improvement will proceed during the next quarter in the form of a review of the important City Centers.
- In the city of Atlanta, the Land Use features of all types have been reviewed and completed.
- Around 7000 km of roads across the country have received new Street Names.
- Around 31000 km of roads have been added.
- We have updated House Number Ranges on 289000 km of streets, using Address Points to calibrate these ranges.
- We have updated House Number Ranges on 13211 km of streets using State and County GIS sources where Address Points are not present.
- Using GIS sources, we have updated Street Names on 13211 km of streets where no street name was previously present.
- 181 downtown Neighborhoods have been added.
- Due to a normalization effort, 5254 updates have been made to either the Display Class or the Settlement Type of existing City Centers.
- 3 New City Centers have been created, and 23 existing ones have been moved to new locations.
- Nicknames have been added to the cities listed below. This is the first time this feature is delivered.

  – New York City: The Big Apple, Gotham

  – Chicago: Windy City, Second City

  – Denver: Mile-High City

  – Los Angeles: City of Angels

  – Seattle: Emerald City, Queen City
