## Product Overview

The WPPPOI data product provides information on the location of, and details relating to, a diverse set of business locations, leisure hot spots and geographic features. The locational accuracy of this data has been further enhanced using Pitney Bowes Premium Spectrum Enterprise Geocoding solution to provide the most accurate position for each Point of Interest available. The following are the features of the product:

- It provides access to the largest, globally georeferenced POI dataset.
- The POIs (available in the product) are geocoded using Pitney Bowes' Master Location Data (MLD) Geocoding dataset, thus further enhancing geocoding accuracy.
- The POIs are classified using both the Pitney Bowes MiCode (providing a consumer-friendly classification across products) and the Standard Industrial Classification (SIC) codes.  
Please note that both these classifications are cross-referenced. The individual POI in the dataset have hierarchical relationships between themselves and others in their 'family'.
- The taxonomy used (within the product) ensures ease of use and global consistency.

As a result, the dataset allow users to make informed decisions around risk analysis, access to services, retail or recreational facilities, location-based marketing and "find my nearest" searches.

## Coverage

WPPPOI v5.11.0 contains POIs for The United States of America and Canada. The following table provides details of each country group, including the ISO3 codes (three-character ISO country codes) for each country included.

<b>Country</b>	<b>ISO3 Code</b>	<b>Countries Included</b>
Canada	CAN	Canada
United States Of America*	USA	United States Of America

## World Premium Plus Points Of Interest 5.11.0 Release Notes

\*USA un-incorporated territories like Guam, Puerto Rico, and Virgin Islands are included in the USA dataset. The following table provides details of the territories added to USA country bundle.

Country Bundle	Country	ISO3
United States of America	Guam	USA
United States of America	Puerto Rico	USA
United States of America	Virgin Islands	USA

## POI Counts

Country	ISO3 Code	POI Counts
Canada	CAN	3,069,507
United States Of America	USA	27,448,156

## Change Log

- Enhanced the quality for 600 brands in USA. Click [here](#) for more details.
- Few brands have been updated with the new names. Click [here](#) for more details.
- Quality enhancements in 600 brands for USA and in more than 100 brands for Canada. Click [here](#) for more details
- False positives brandnames have been untagged
- Latitude and Longitude values may occasionally change slightly due to geocoding enhancements.
- Applied few changes in the address components for few records
- Removed few junk characters from the data (\, <, >, %, ^, ||)
- Improved the Brand Name standardization in the data and it has been standardized for respective country:

Country	Brandname Counts
Canada	330
United States Of America	2,007

## Known Issues

There are some known issues with the source data. We will strive to address these issues in subsequent releases in a timely fashion. Please contact Technical Support with any questions you may have.

This section covers known issues and behaviors that require further explanation:

- We have removed around 65 non-standardised Areaname3 records from the USA data
- Some duplicates may be encountered in the dataset.
- Some invalid values exist in the Name, areaName1, areaname3 and areaName, TradeName and Postcode column including instances where the Postcode column has values as 'zeroes'.
- Some diacritic loss in Name, TradeName, formattedAddress, mainAddressLine, addressLastLine, areaName1 and areaName3, Domestic Ultimate Address, Global Ultimate Address and Parent Address columns.
- There are a few instances of text truncation exist for the Name, TradeName, Business Line, areaName3, formattedAddress, mainAddressLine, Http, Email, Postcode and areaName2 columns.
- There are a few instances where the Employee Here (number of employees at the current location) count mismatches the Employee count (total number of employees).
- There are a few instances that have inconsistent Status Code and Subsidiary Indicator mapping.
- The Email, Http, Ticker symbol, and Exchange Name columns are not fully populated.
- The SIC8 (code) descriptions are undergoing updates. As a result, some values may not have any or updated description(s) and may have been removed.
- The administrative layer names are not standardized. As a result, some areaname4 values may be blank. There are a few instances where different variations of the same name are encountered in the areaName1 column.
- Mainaddressline and formattedaddress are not standardized in few records.
- There are a few instances where House number/Street Name is appearing twice in mainaddressline.
- There are a few instances where the areaname3 is populated with the name of a different admin level.
- Brandname standardization is work in progress, so there maybe some minor discrepancies.
