

PostMap™ UK 53

RELEASE NOTES

Summary

MapInfo PostMap™ UK Postcode Boundaries constitute a complete set of postcode sector, district and area boundaries for the UK. Boundaries are available at two different resolutions: High and Low. High Resolution boundaries suit the most demanding of applications, whilst Low Resolution boundaries constitute the more compact of the two datasets, being intended for use in thematic mapping, the creation of large territories (e.g. sales territories) or other applications where positional accuracy is less important.

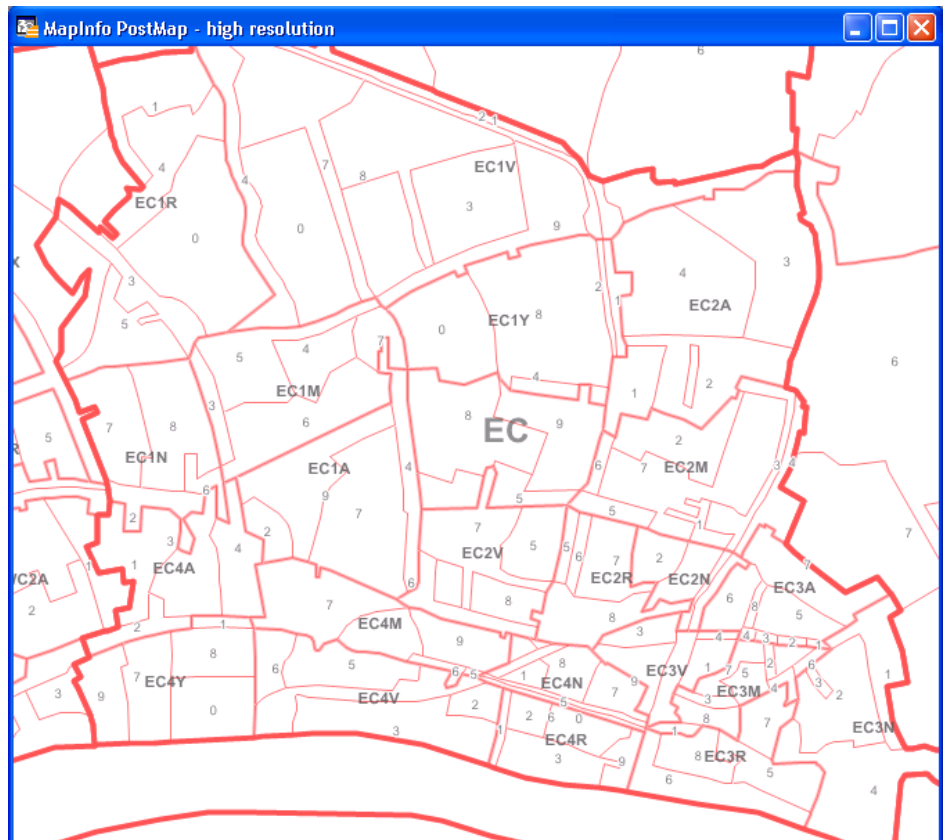

Benefits

- PostMap™ displays postcode sectors, districts and areas for the entire United Kingdom.
- Separate data for Northern Ireland is available using the Irish Transverse Mercator Grid.
- PostMap™ Boundaries contain workspaces that display boundaries and labels at optimum zoom levels.
- Depending on your requirements, PostMap™ is available in either High or Low Resolution.

Features

- Data Vintage: January 2012
- Ten new sectors.
- Two updated workspaces – `postuk_h_10_5.wor` (PostMap™ UK High Resolution) and `postuk_l_10_5.wor` (PostMap™ UK Low Resolution) – are included for customers who have upgraded to MapInfo Professional 10.5 and wish to take advantage of the enhanced rendering capabilities available with this package, including: translucency of vector objects (map features, labels, themes, text and layout objects); smoothing (anti-aliasing) of text, vector and images; improved printing and zoom related style overrides (style changes dependant on zoom level).
